
*SICSA DVF: Mostafa Ammar, Regent's Professor
at the Georgia Institute of Technology and Fellow
of the IEEE and ACM*

Mostafa Ammar, Regent's Professor at the Georgia Institute of Technology and Fellow of the IEEE and ACM, visited Scotland for one week in July.

While his visit was based in Stirling to advance collaborations with Marwan Fayed, he spent a full day at each of Edinburgh and Glasgow Universities, to meet members of the wider Scottish community. At Edinburgh he delivered a wide audience talk to present his personal perspective on the history of computer networking research. The audience was unanimous in their suggestion and support for a publication in a wide audience magazine. While at Glasgow, Professor Ammar's talk focussed on technical issues his team is facing, and was impressed by the relevance of Glasgow's Raspberry Pi work to his own.

He also offers a very personal thanks, as well as high praise for all that he met and saw. In particular, he noted that at every moment and by every individual he felt nothing short of welcomed, and very much hopes to return.

The Host of this DVF was Marwan Fayed, University of Stirling
